Quiz #20

The figure above shows the best estimate and CI for λ , and the prediction interval for the number of fires, in the wildfire Poisson model.

Which parts of the figure correspond to each of the following?

`exp(coef(fire_mod)[1] + coef(fire_mod)[2] * mean_vpd)`

`exp(qnorm(c(0.025, 0.975), mean = pred_lambda, sd = se_lambda))`

`qpois(c(0.025, 0.975), lambda = pred_lambda)`
